

inGo

Made in Germany. Tried and tested in construction. Designed for more.

inGo was built where it matters – on the job site. The platform comes from Tibe.io, a subsidiary of the Lindner Group, a major player in Germany's construction sector.

Key Facts about Lindner Group

3.000

Daily construction sites

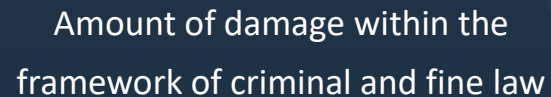

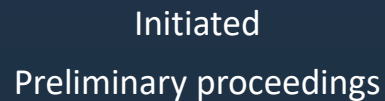

400

Companies from other European
countries involved annually

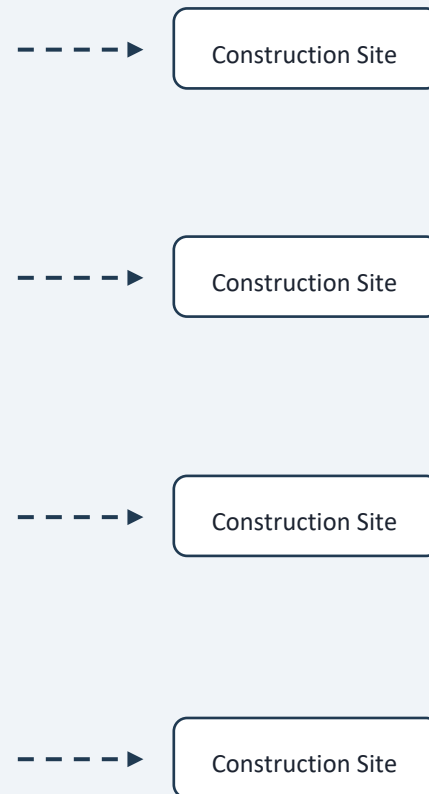

> 1.000

Employees from other European
countries employed annually

Effort of central administration

Effort of central administration

“

The overall objective is to contribute to more fair and effective labour mobility, so workers can move freely and confidently, knowing that their rights and wages are protected.

Paperwork costs time. Mistakes costs more.

Simplify the verification process for all parties involved

Ensure secure and transparent data handling

Reduce Paperwork

Eliminate language barriers

Ensure legal employment (A1 certificate) and minimum wage compliance before workers enter construction sites

General contractor are responsible for what their subcontractors do

inGo helps them with legal obligations by recording credentials, controlling access, and documenting minimum-wage and employment-status information — all digitally, in one place.

Requirements centrally defined

All credentials are digitally stored and verifiable

Subcontractors know what is needed

Access is only possible with complete documents

Subcontractors must demonstrate that they are trustworthy

inGo saves queries, speeds up processes. It also reduces paperwork, support collaboration, creates trust and secures new orders.

All credentials in one place.

Automatic information if something is missing.

Subcontractors show at a glance that employees are ready for action.

Employees should have control over their data and decide with whom they share it

InGo enhances worker's sense of ownership over their information. Added value is the wallet app will also show or warn the workers about any invalid or expired documents.

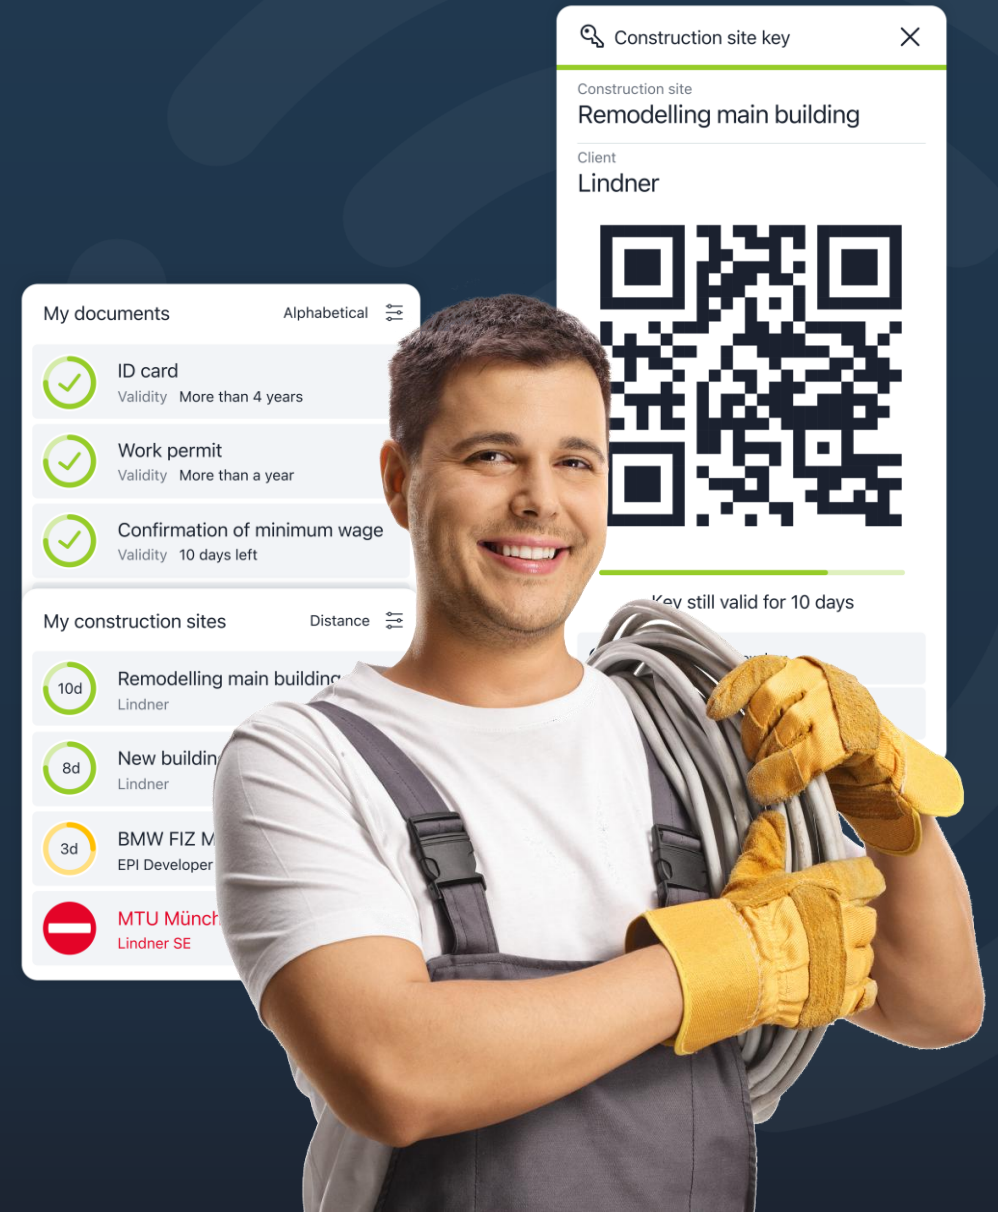

Data sovereignty lies with the employee.

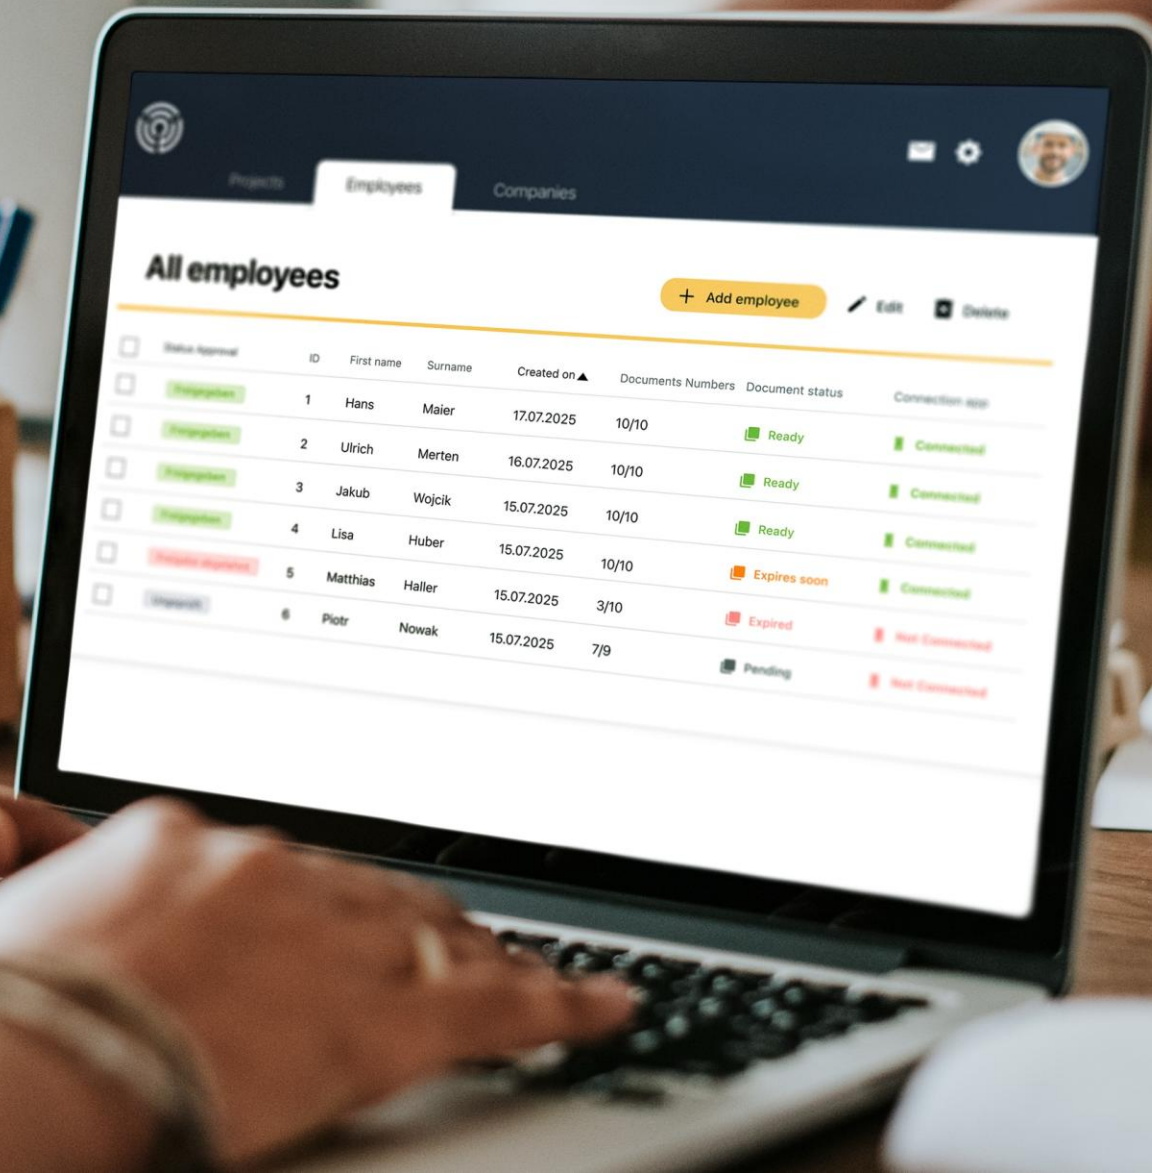

Automatic information of expiring documents.

All credentials in one portable and secure wallet.

All employees

Challenges and our way forward.

- ✓ First construction site with our own access system
- ✓ Integration to EUDI Wallet App
- ✓ Liaising with various authorities — including customs—to streamline the process

Thank you!
